PLATFORM UPDATE REPORT

FestFlow — What We Built

A plain-language summary of every change made to FestFlow across both sessions: organizer setup, volunteers, participants, judging, the rules the system now enforces, and the bugs we fixed along the way.

PROJECT	COVERS	DATE	STATUS
FestFlow web app (React 19 / TypeScript)	Organizer · Volunteer · Participant · Judge	November 7, 2026	Built, tested, building cleanly

4 roles with a full event workspace

11 bugs found & fixed

23 automated rule checks, all passing

8 end-to-end browser test runs (Edge)

01 Status of the earlier report

The previous report (sidebar navigation, QR attendance, onboarding policies, tables & submissions) is still the foundation. These parts changed since:

EARLIER ITEM	NOW	WHAT CHANGED
Organizer left sidebar (6 tabs)	KEPT	Same structure. Volunteers and participants now get the same "event workspace" sidebar pattern.
Simulated camera scanner	REPLACED	Real camera scanning now reads QR codes live (needs HTTPS or localhost). Roster and manual-code modes are still there.
Volunteer start-lock	EXTENDED	Pending applications now show as *expired* at event start instead of hanging forever. Organizers can also set deadlines and close sign-ups early.
`ParticipantTeamPage.tsx` **badge**	MOVED	Page removed. The team badge (now a real QR) lives in the participant's event **Overview**.
`VolunteerRolePage.tsx` **badge**	UPGRADED	Now the event's **My Profile** tab, with a real QR code and the volunteer's experience.
"Rubric weights, live grading matrix"	REPLACED	Replaced by organizer-defined criteria and a weighted **Leaderboard** (section 05).

02 Creating an event (organizer)

Create and Edit Event now cover everything needed to run the event:

SETTING	OPTIONS & RULES
Event type	Hackathon, Competition, Workshop, Conference/Talk, Meetup, Cultural, Sports, Fun/Social, Other. Shown as a badge and used for filters.
Participation	**Solo** or **Teams** with min/max size (validated, max 10). Can't switch solo↔team once people register.
Location	**Online** (venue becomes a meeting link; no QR check-in) or **In person**.
Registration windows	Separate optional **deadlines** plus a **"Close now"** switch for participants and volunteers. With no deadline, both close when the event starts.
Evaluation rounds	Round weights must total **exactly 100%**. A live total turns red and blocks saving otherwise.
Volunteer recruitment	Private links (one per role) or open applications using a **custom application form** (Google Forms–style: short answer, paragraph, multiple choice, required).

03 Running an event (organizer workspace)

Participants tab

- ✓ **Applications panel:** accept or reject teams and solo entrants.
- ✓ Rosters, tables, check-in and stats count **accepted** teams only.
- ✓ Registration open/close switch with the closing date.
- ✓ Submissions show screenshots, links, tags and technologies.

Volunteers tab

- ✓ Applications show form answers, the volunteer's **profile** and FestFlow history.
- ✓ Task status is **read-only** for organizers (volunteers update it). Organizers **Verify** finished tasks.
- ✓ "General" tasks can be claimed by any volunteer.
- ✓ Application close switch; real-camera QR check-in.

Judging tab

- ✓ **Criteria editor:** name each criterion and its points. Must total 100.
- ✓ **Leaderboard:** per-round judge averages, weighted final out of 100, medals, tie ranks, track filter, "partial" flags.
- ✓ Judge links scoped by table and a real track (dropdown).

After the event ends

- ✓ Everything becomes **read-only**, enforced in the data layer too.
- ✓ **Download Report:** stats, final standings, teams, volunteers, sponsors, tasks and the attendance log.
- ✓ Task progress shows 100%.
- ✓ Organizers get notifications for new applications.

04 Volunteers & participants

Volunteer journey

Browse Events (type filter) → Fill organizer's form → Accepted (notified) → My Events: ongoing / upcoming / past → Event: Tasks · Announcements · My Profile (QR)

- **Join by link:** paste a private invite link (or token) on the dashboard to join a "My Team" event directly. No approval needed, since the link is the approval.
- **Tasks:** take up open tasks, update status, release unfinished ones, and see "Awaiting verification" or "Verified".
- **My Profile** (sidebar): a proper profile page (headline, about, skills, roles, languages, experience timeline) with an **Edit** button. First-timers still have something to show.
- Notification banner for decisions, new tasks, verifications and announcements.

Participant journey

`Explore Events (type filter)` → `Register` → `Create / join / open team` → `Lead submits application` → `Accepted` → `Submit project`

- **Event workspace:** Overview (event details + My Team), Submission, Announcements.
- **Teams:** join by code or click **"Join this team"** on teams marked *open to new members*. The lead can remove members; anyone can leave; you can unregister.
- **Solo events:** registering is the application. No team screens.
- **Submission:** project name, up to 5 images (auto-compressed), YouTube / website / repo links, description, tags, technologies, additional info.
- Participants **never see scores or rankings**. Results are organizer- and judge-only.

05 Judging & the scoring math

Judge portal

- ✓ One **tab per round**, with progress (scored / total) and the current round marked.
- ✓ Each criterion is scored 0 to its own max; totals are out of 100.
- ✓ **Save** button per project, plus autosave. Edits are never lost on leaving.
- ✓ Offline queue syncs when the connection returns.

How the final score works

1. Each mark → % of what it was scored out of.
2. Average the judges' % for each round.
3. Final = Σ (round average × round weight).

Example: 89/100 in a 35% round contributes 31.2 points. Scores are recalculated and capped on the data side, so a tampered screen can't inflate them.

06 Rules the system now enforces

All of these are checked in the data layer, not only hidden in the UI.

RULE	EFFECT
Past events are read-only	Every write is refused once an event ends (31 checks across all write paths).
No double roles	Nobody can be a participant and a volunteer at the same event.
Team limits	Full teams can't be joined; teams below the minimum can't apply or submit; one team per person per event.
Approval before submitting	Only accepted teams or entrants can submit, check in or be judged.
Sign-up windows	Deadlines and "Close now" stop new registrations, applications and invite joins (invites still work during a live event unless closed).
Totals of exactly 100	Round weights and judging criteria both must add up to 100.
Who changes what	Only the assignee updates a task; only organizers verify; only team leads apply or remove members.

07 Bugs found & fixed

BUG	IMPACT BEFORE THE FIX
Create Event stuck "buffering"	Form library (resolvers v3) couldn't read zod 4 errors. Any invalid field froze the form. Upgraded to v5.
Joining a team wiped other teams	Saved only the current event's teams over the whole list, deleting every other event's teams.
Duplicate IDs	Records created in the same millisecond (events, roles, profiles) overwrote each other.
Leaderboard math	Marks out of 70 were treated as out of 100, which under-scored every project.
Judges saw zero projects	A free-text track ("AI & Web3 Systems") matched no real track.
Edit Event shifted times	UTC vs local time: each save moved the event by the timezone offset.
Unsubmittable volunteer form	A required role question with no roles blocked submit silently.
Participants could volunteer	The invite page turned whoever was logged in (even a participant) into a volunteer.
Invites broke on live events	Private invites stopped working once the event started. Now they only stop when closed.
Stuck applications	Pending applications hung forever once the event started.
Broken Cancel link	Edit Event "Cancel" pointed to a page that doesn't exist, bouncing organizers to the landing page.

08 Where things live (routes)

ROLE	MAIN PAGES
Organizer	`/organizer` · `/organizer/events/new` · `/organizer/events/:id` + `/volunteers` `/participants` `/judging` `/sponsorships` `/announcements` `/edit`
Volunteer	`/volunteer` (browse) · `/volunteer/my-events` · `/volunteer/profile` · `/volunteer/events/:id` + `/announcements` `/profile`
Participant	`/participant` (explore) · `/participant/my-events` · `/participant/events/:id` + `/submission` `/announcements`
Judge	`/judge/:token` (no login)

09 How it was tested

- ✓ **Automated self-check**: 23 groups of rule tests run against the real data layer (math, permissions, windows, teams, approvals, read-only lock).
- ✓ **Browser runs in Microsoft Edge** covering every main flow, including phone-width layout checks and screenshots.
- ✓ TypeScript type check and production build pass on every change.

10 Known limits & next steps

ITEM	NOTE
Demo storage	Data lives in the browser (no backend yet). Use **Reset Demo Data** after updates.
Images	Stored in the browser for now; should move to Supabase Storage when the backend is connected.
Mobile app	Not updated yet (planned for later).
Camera scanning	Browsers allow the camera only on HTTPS or localhost.
Open decisions	Per-round criteria? Should judges see the leaderboard? Single-use invite links?

11 File changes at a glance

TYPE	FILES
NEW **Pages**	Volunteer: `VolunteerBrowsePage` `VolunteerMyEventsPage` `VolunteerEventLayout` `VolunteerAccountProfilePage`. Participant: `ParticipantAllEventsPage` `ParticipantMyEventsPage` `ParticipantEventLayout` `ParticipantEventOverviewPage`
NEW **Components**	`CameraQRScanner` `EventFormatFields` `EventFormatBadges` `CategoryFilter` `RegistrationFields` `TeamApplications` `CriteriaEditor` `Leaderboard` `NotificationBanner` `ChipInput` `SubmissionShowcase` `VolunteerFormBuilder` `JoinByInviteLink` `VolunteerProfileSummary`
NEW **Logic**	`eventRules.ts` (format, windows, validation) · `judging.ts` (criteria & math) · `eventReport.ts` (standings & report) · `volunteerForm.ts` · `imageCompress.ts`
CHANGED	`mockStorage.ts` (rules, approvals, notifications, safe IDs) · `types.ts` · `mockData.ts` · `App.tsx` · Create/Edit Event · organizer Volunteers / Participants / Judging / Overview · `JudgeMarkingPage` · `QRAttendanceModal` · volunteer & participant layouts, tasks, announcements, submission · sponsor browse/apply · invite page
REMOVED	`ParticipantTeamPage.tsx`, `ParticipantEventsPage.tsx` (replaced by the event workspace)
Dependencies	Added `qrcode.react` (QR badges) and `jsqr` (camera decoding). Upgraded `@hookform/resolvers` 3.9 → 5.2.
